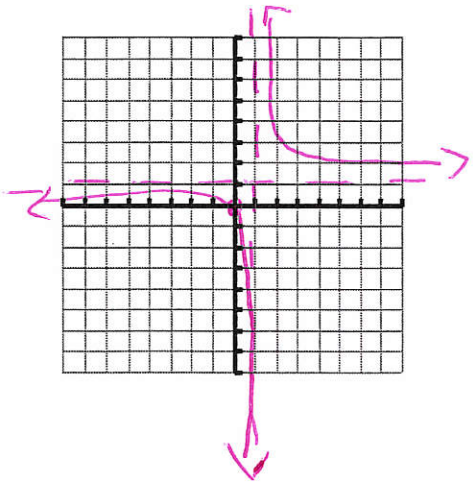
PRACTICE A

Key

4. Identify any holes, vertical asymptotes, horizontal asymptotes, and slant asymptotes of each graph. If they do not exist write **none** in the space provided. Accurately graph each rational function.

a. $f(x)=\frac{x}{x-1}$



$x \neq 1$ $(-\infty,1) \cup (1,\infty)$

Domain _____ Hole(s) none

Vertical Asymptotes $x=1$

X-intercepts $(0,0)$ Horizontal Asymptotes $y=1$

Set $y=0$

$0=x$

BOSCO

Y-intercepts $(0,0)$ Slant Asymptote none

$x=0$

7. If you have a BOTNO, then there is no HA. Instead, there is a slant or oblique asymptote.

TO FIND THE EQUATION OF A SLANT ASYMPTOTE, you simply perform the division that is left in the working equation. Any remainder is NOT part of the slant asymptote.

$$f(x) = \frac{x^2 + 2x - 5}{x - 3}$$

Example: *BOTNO*
SLANT
$(x^2 + 2x - 5) \div (x - 3)$

3 | 1 2 −5
3 15
1 5 10

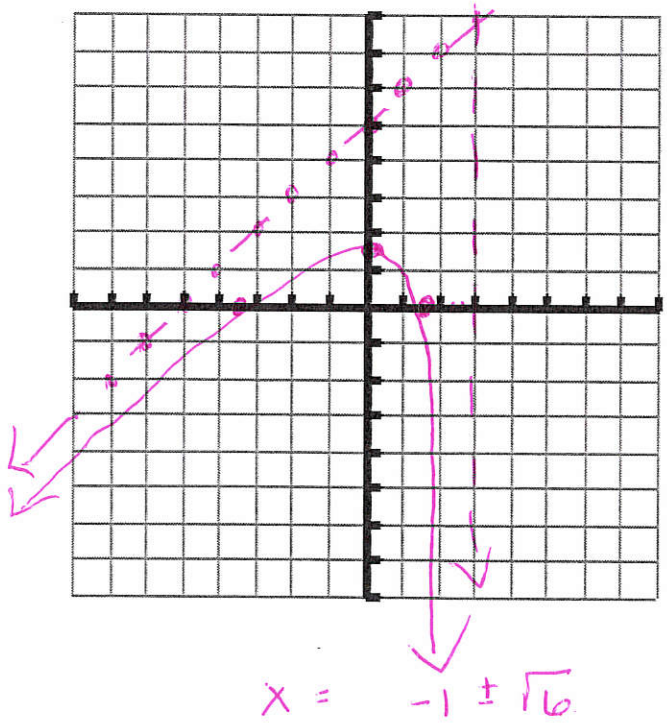
$y = 1x + 5$ = slant asy.

STEPS:
1. DOMAIN RESTRICTIONS $x \neq 3$
2. HOLES?
3. x intercept
4. y INTERCEPT
5. VA
6. HA

Domain $(-\infty, 3) \cup (3, \infty)$

The graph can only cross x and y axes at the intercepts you've found.
VA's are fences that the graph cannot cross.
Graphs hug asymptotes

$x = 4$
$f(x) = 16 + 8 - 5$
$= 19$



V.A. $x = 3$

Slant $y = x + 5$

$(0, 5/3)$

$(\ , 0)$

$0 = x^2 + 2x - 5$

$x = \frac{-b \pm \sqrt{b^2 + 4ac}}{2a}$

$x = \frac{-2 \pm \sqrt{4 + 20}}{2}$

$x = \frac{-2 \pm \sqrt{24}}{2} = \frac{-2 \pm 2\sqrt{6}}{2}$

$x = -1 \pm \sqrt{6}$
